WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A 50 x 900 mm frame of 30 x 30 x 3 angle, 50 mm deep overall.
One 40 mm steel roller, 880 mm long, on two sealed bearings in the frame ends; roller top 950 mm above the floor, level with both platens. Check your presses and set this height to suit.
Two 9 mm holes in the end that meets the hot press frame.
Fit: bolted to the side of the hot press frame with two M8 bolts; the other edge rests against the cooling press frame.
The mould slides from the hot press over the roller onto the cooling press without being lifted.
Check: a straight edge laid across both platens and the roller touches all three; nothing steps up by more than 1 mm.
