WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Front 2450 x 2300, two ends 1596 x 2300, roof 2450 x 1596: panels of 1.5 mm galvanised sheet on 40 x 40 x 4 angle, 60 mm overall.

No back panel: the container wall closes the booth.

Front: opening 1, 1200 x 600, 80 to 1280 from the left end; opening 2, 1040 x 600, 1330 to 2370 from the left end; both 900 to 1500 mm above the floor. Frame every opening.

Left end: 270 x 270 hole for the duct, 1015 to 1285 from the front face, 1915 to 2185 up; seal the duct with a rubber collar.

Roof: one rafter of the same angle at mid-length.

Bolt the panels together through the frames with M8 bolts.

Fit: cleats of 40 x 40 angle screwed to the floor at 600 pitch; back edges on rivet nuts in the wall, closed-cell foam strip cut to the corrugations. Put the presses in first.

Check: no gap wider than 5 mm round the panels with the fan off.

REFLOWECONOMY
