WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Footprint 1000 x 700 mm, top frame 1750 mm above the ground.
Four legs of 50 x 50 x 3 SHS, 1700 long, with 150 x 150 x 8 base plates (four 12 mm holes each).
Top frame of the same tube, welded all round, 50 mm deep.
One diagonal brace of 30 x 30 x 3 angle on each long side.
Galvanise or paint after welding.
Fit: bolted with M10 anchors to a concrete pad outside the back wall, its near legs 80 mm from the wall, centred on the duct hole (centre 8150 mm from the outside of the intake end).
The fan and filter box bolts to the top frame (M10, four places);
the stack goes on the fan outlet and ends 1 m above the roof.
Check: the frame is level and does not rock under a hand push.

REFLOWECONOMY

github.com/BoujeeEnjinia1701/refloweconomy

ReflowEconomy fan stand (outside): making sketch
